SET YOUR SIGHTS HIGH

...WITH A CAREER IN AVIATION MAINTENANCE

The Aviation Industry is growing! Aircraft companies like Boeing, Southwest, and Delta will need 35,280 new airplanes over the next 20 years.* That many new aircraft means a need for highly skilled technicians to perform regular inspections, maintenance and mechanical repairs.

The Aviation Institute of Maintenance trains our students hands-on with real aircraft. We develop their skills and prepare them for real jobs in the industry.

Source: FAA Aerospace Forecast, Fiscal Years 2013-2033

An A&P certification tells employers you have the knowledge and the experience to take on the responsibility of maintaining their aircraft.

A History of Excellence

The FAA demands the world's strictest standards for training aircraft maintenance personnel. For 20 years, AIM has not only met these standards but exceeded them. In fact, AIM is the largest provider of new AMT mechanics to the aviation industry.†

AIM's programs focus on basic theory combined with many hours of hands-on learning in hangars with relevant aircraft and training aids.

There's no place to go but up! Call AIM for more information.

Consider the Opportunities as You Reach New Heights!

Your education doesn't have to end at graduation. As your career advances, you will continue to work with the latest technologies. AIM graduates may work with major airlines, commuter or corporate aviation or in manufacturing. When you receive your inspection authorization, you can advance to positions of higher authority, inspecting and approving the work of other aviation technicians.
